Gazing west.

New surgical procedure can restore hearing

Sparrow doctors are restoring hearing to people affected by single-sided deafness through an innovative, new surgical procedure and device called a bone-anchored hearing aid, or BAHA.

The BAHA consists of a small, titanium screw implanted into the bone behind the ear, an external, cone-shaped piece that connectsruith the screw, and the hearing device that attaches to the cone.

Sparrow ear, nose, and throat specialist Kurt Richardson, M.D., implants the tiny screw in an outpatient procedure that takes
